

Data visualization for Takapuna AQI pm10 data fetched from clients server's API

do visualization by connecting API
data in the visualization tool like
python, power bi or ms fabric

find a way to use or incorporate a
cloud platform like azure to
incorporate MS fabric

api from kister to get the data

Choose the optimum tool to do EDA

make it with Jupyter notebook

or try DASK for automation of EDA for big
DATA

or other option via cloud platform
